# Tennessee Custom Rates Survey, 2013

Becky Bowling, Extension Assistant

This publication provides information on current custom farm work rates by crop reporting districts in Tennessee (Figure 1). Custom rates charged and/or paid by Tennessee farmers in 2013 are presented in this publication by operation, unit of charge, and area of the state.

Figure 1. Crop Reporting Districts

The names of at least 10 people or businesses per county who did custom farm work or hired custom farm work during the previous 12 months were solicited from each Tennessee county Extension leader in March 2013. Lists were returned from 45 counties with a total of 509 names. These names were used as a sample list for a mail survey. This survey is not based on a random sample of custom operators in Tennessee. Each operator on the compiled list was mailed a survey, cover letter, and return envelope in June 2013.

After four weeks, a second survey was sent to those not replying to the first survey. The number of surveys mailed and replies received by grouped crop reporting districts are shown in Table 1. For all areas combined, the response rate was 20 percent.

Table 1. Summary of Mail Survey of Tennessee Custom Rates Survey, 2013

Crop Reporting District	Number of Counties	Surveys Mailed <sup>1</sup>	Surveys Returned (Wrong Address or No Custom Work)	Surveys Completed	Percent Response
1 & 2	18	139	8	25	19
3 & 4	33	184	7	36	20
5 & 6	44	186	8	37	21
Total	95 <sup>2</sup>	509	23	98	20

<sup>1</sup>One follow-up mailing was made about four weeks after the first mailing  
<sup>2</sup>List of names for mail survey were available from only 45 counties.

Information was requested on rates paid or received for custom work. Respondents were asked to provide rates only for the custom work which they did for others or hired others to do for them.

The number of responses and the custom rate averages for the state and crop reporting districts for each operation are shown in Table 2. Some of the variation in rates, especially hourly rates, is due to kind and size of equipment used. Because of the wide variety of machines used, it was not possible to classify the information by machine size.

Cost of materials was not included in the rates, except where specified. The rates reported in this publication do not necessarily indicate the fairness of any given rate but simply indicate the rates being charged or paid by those reporting. A “fair” rate could be either higher or lower than those shown. Actual custom rates may vary according to availability of machinery in a given area, timeliness, operator skill, field size and shape, crop conditions, and performance characteristics of the machine being used.

There is a wide variation in rates charged for operations, even within the same geographical area. One reason for the large variance in rates could be that some custom work is done for friends, relatives, and neighbors at reduced rates. Some custom work is done by farmers who do their own work first and may not include the full cost of machinery ownership in their rate. Also, it is easy to under-estimate the full cost of ownership and operating costs of machinery.

The custom rates shown in Table 2 should only be used as a guide. Rates change from year to year due to cost changes and the availability of custom operators. The average price of diesel fuel at the time of this survey was \$3.75 to \$4.00 per gallon.

A farm operator must consider several things (cash flow, ownership and operating costs, labor, reliability of custom operators) when making the decision to own or lease machinery versus hiring custom work. A spreadsheet to help evaluate the cost of owning and operating farm machinery is available online at <http://economics.ag.utk.edu/soft.html>

Table 2. Custom Rates by Operation

Operation		Tennessee			District 1 & 2			District 3 & 4			District 5 & 6		
		No.	Average	Range	No.	Average	Range	No.	Average	Range	No.	Average	Range
