4-H Entomology/Beekeeping

January 2020

For more information, contact:

DeWayne Shoemaker, Professor, Department of Entomology and Plant Pathology
Scott Stewart, Professor and Specialist, Department of Entomology and Plant Pathology
Karen Vail, Professor and Specialist, Department of Entomology and Plant Pathology
Jennifer Tsuruda, Assistant Professor, Department of Entomology and Plant Pathology
Jennifer Richards, Assistant Professor, Department of Agricultural Leadership, Education and Communications
University of Tennessee Institute of Agriculture

Kaushalya Amarasekare, Assistant Professor and Specialist, Department of Agricultural and Environmental Sciences
Tennessee State University

Insect Basics

• Define entomology, entomologist, insect, arthropod and exoskeleton.
• Explain the importance of entomology.
• Identify the major insect body parts, including head, thorax, abdomen, antenna, compound eye, leg (coxa, trochanter, femur, tibia, tarsus), spiracle, tympanum and wing; explain their functions.
• Describe the importance of careful observation and record keeping.

Arthropods

• Describe the Phylum Arthropoda.
• Explain how insects differ from other arthropods.
• List examples of insects (Class Insecta) and spiders and other arachnids (Class Arachnida).

Insect Pollinators

• Define caste, worker, queen, drone and pollinator.
• Describe the castes of honey bees, the races of honey bees, honey and wax they produce.
• Explain the importance of honey bees and other types of bees.
• List five plants in Tennessee pollinated by honey bees and five plants pollinated by other types of bees.
• Create a list of the equipment that a beekeeper needs and an estimated budget.
• Compile beekeeping records.
• List five non-bee insects that are pollinators.
• List five food crops that need pollinators.
4-H Entomology/Beekeeping Outcomes, 1-2 Years

**Diversity of Life**
- Define biodiversity and evolution.
- Explain the importance of biodiversity.
- Describe the value of insect diversity.
- Describe various ways that different insects communicate.
- Develop a definition of diversity and inclusion.

**Exotic and Invasive Insects**
- Define exotic species and invasive species.
- Compare and contrast the differences between exotic and invasive species.
- Discuss why not all insects (in Tennessee and elsewhere) are native.
- Investigate 10 insects found in gardens, crop fields or households in Tennessee.

**Harmful and Beneficial Insects**
- Define integrated pest management, predator, parasite, pathogen and parasitoid.
- Explain why some insects are pests and some are beneficial.
- Identify pest insects in Tennessee that affect plants, non-human animals and humans.
- Identify beneficial insects in Tennessee that affect plants, non-human animals and humans.
- Investigate invasive, beneficial and pest insects in Tennessee.

**Potential Activities**
- Identify and label major insect body parts: head, thorax, abdomen, antenna, compound eye, leg (coxa, trochanter, femur, tibia, tarsus), spiracle, tympanum, wing.
- Investigate and describe 10 insects that you can find in a garden, crop fields or households in Tennessee.
- Investigate and describe several invasive, beneficial or pest insects in Tennessee.
- Create your own definitions of diversity and inclusion.
